

Receive the quality, reliability, security and scalability of the most extensive private network in Canada

IP VPN service from BCE Nexxia

IP VPN service from BCE Nexxia is a wide area network (WAN) solution delivered over a single and secure leading North American MPLS network. It allows you to easily and affordably connect your customers to their end users to share voice, data and video across Canada, the U.S. and/or around the world.

With our IP VPN service, you receive the quality, reliability, security and scalability of the most extensive private IP-based network in Canada – all of which are crucial in today's competitive environment.

Creating virtual private networks for your customers over our MPLS network saves you the cost of expensive network builds and ongoing management. It also makes IP VPN a very cost-effective method of securely linking geographically dispersed sites.

Solution

With our IPVPN service, you can simplify your network planning and management with:

- A single, integrated IP-based network allowing your customers to consolidate voice, data, Internet and video applications
- A fully scalable architecture enabling you to grow seamlessly without network disruption or the need for network reengineering
- Advanced detailed service and performance reports available via a web-based portal
- Network connection with Canada through our MPLS Interconnect service

Features

- Your choice of control over the end-customer router located on customer premises, or select a solution that is fully managed by BCE Nexxia

- Flexible IP VPN packages and options that enable you to select service performance attributes on a customer by customer basis
- Shared Internet access that allows Internet traffic to flow through the same access as the IP VPN service and only requires one connection
- Extensive diversity options to ensure the most critical locations have enhanced protection
- Load sharing to ensure higher overall availability while delivering on specific customer requirements
- More than 80 Points of Presence (POP) across Canada at conveniently located interconnection points
- Various cost-effective access types, leveraging Time-Division Multiplexing, Optical Ethernet, DSL, Internet and wireless
- Secure and private network that undergoes yearly security audits, including SAS 70 audits
- 24/7 year round technical support with a national, highly skilled, single-point-of-contact help desk
