

Dedicated point-to-point transport highway for voice, data or image to and throughout Canada

Private Line service from BCE Nexxia

Private Line service from BCE Nexxia offers a reliable and economical way for your customers to extend their reach into Canada. Our secure service also helps address your customers' need for a Canadian network infrastructure through our high performance point-of-presence (POP) to point-of-presence (POP) connectivity.

Private Line service is a dedicated, point-to-point service that can be channelized for transporting data, voice and video within North America. As a Bell Canada company, we access coast to coast SONET Network for private line circuits that provides reliable, dedicated and proven network transport across Canada and at key border crossings. Private Line services are available at speeds from DS1 to OC48.

The Solution

- Dedicated private lines from DS1 to OC48
- Lower speeds (DS1, DS3) serve applications to the customer premise
- Higher speeds (DS3, OC3, OC12, OC48) backhaul traffic between hubs or extend the reach of other services such as Ethernet and IP VPN
- Extensive metro, inter-city, regional and national coverage across Canada and interconnection options between Canada and the U.S.
- Reliable service assurance that aligns with industry best practices. With over 130 years of experience, we provide you with best in class service assurance on private lines across our international footprint.

The Features

- Point-to-point, hub and spoke or multipoint configurations
- Ability to build a series of point-to-point circuits converging on a single hub and backhauled to a central POP
- Transport that can carry voice, data or image

- Best in class transport diversity. All of our major on-net cities have at least two POPs linked via our own metro fiber. SONET ring topology is protected which ensures that your information continues to flow should the ring experience a breach.
- Clear channel or channelized service

The Benefits

- Flexible, attractive pricing based on volume and speed
- Superior reliability over switched facilities, meaning data integrity
- Cost-effective service since private lines can be channelized to carry multiple circuits over a single transport thus avoiding the need to purchase several low speed circuits
- 24/7 support, management and surveillance
- Mean-to-time-repair of just 4 hours, which means greater peace of mind in terms of accommodating mission critical applications

About BCE Nexxia
